

Amendments to the Claims:

The listing of claims will replace all prior versions, and listings of claims in the application:

Listing of Claims:

Claims 1 – 23 (cancelled)

Claim 24 (new) A digital content-data distribution system comprising:

an order terminal via which a user selects data to be downloaded to a user memory carried by the user or a package medium for content data that the user wants to buy; and

a delivery center including an order-accepting unit to accept an order placed by the user for the package medium when the user selects the package medium via the order terminal, a stock-managing unit to check whether there is a stock of the package medium, and a delivery unit to deliver the package medium to a user's designated place when there is the stock.

Claim 25 (new) A digital content-data distribution system comprising:

a server to store at least a piece of content data;

an order terminal, in response to an order placed by a user to buy both data to be downloaded to a user memory carried by the user and a package medium for the content data, to communicate with the server and download the data to the user memory; and

a delivery center, communicable with the server, including an order-accepting unit to accept an order placed by the user for the package medium, a stock-managing unit to check whether there is a stock of the package medium, and a delivery unit to deliver the package medium to a user's designated place when there is the stock.

Claim 26 (new) A method of distributing digital content data comprising the steps

of:

selecting, by a user, data to be downloaded to a user memory carried by the user or a package medium for content data that the user wants to buy;

accepting an order placed by the user for the package medium when the user selects the package medium;

checking whether there is a stock of the package medium; and

delivering the package medium to a user's designated place when there is the stock.

Claim 27 (new) A method of distributing digital content data comprising the steps of:

performing a procedure, by a user, to buy both data to be downloaded to a user memory carried by the user and a package medium for content data;

communicating with a server that stores the content data, in response to an order placed by the user for the data, to download the data to the user memory;

accepting an order placed by the user for the package medium;

checking whether there is a stock of the package medium; and

delivering the package medium to a user's designated place when there is the stock.
